Today's Guest Presenter

Danny W. Felty MD, FAAFP, CMD

Objectives

- Define symptomatic UTI versus asymptomatic bacteriuria
- Review UTI assessment criteria
- Discuss communication with prescribers
- Identify UTI prevention strategies

Why Focus on UTIs in the Nursing Home?

- Merry Constraints and the second seco
- UTIs are the most frequently reported infections in long term care¹
- UTIs are a significant cause for hospital readmissions and sepsis¹
- Monitoring of symptomatic UTIs helps identify trends in these infections and provide data to improve antibiotic use in your facility:
 - 30-60% of antibiotics in SNFs are for suspected UTIs²
 - 40-75% of those antibiotics used may be unnecessary or inappropriate²

1. Agency for Healthcare Research and Quality (AHRQ) Safety Program for Long-Term Care 2. CDC's The Core Elements of Antibiotic Stewardship in Nursing Homes

Urinary Tract Infection

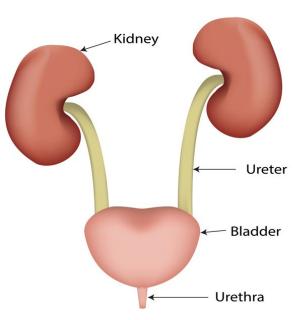

Quality Improvement Organizations Sharing Knowledge. Improving Health Care. CENTERS FOR MEDICARE & MEDICAID SERVICES

The Urinary System

Definition

An infection that involves any of the organs or structures of the urinary tract, including the kidneys, ureters, bladder and urethra.

Most commonly, it is a bladder infection.

Risk Factors

- Age (especially over 85)
- Female
- Neurogenic bladder
- Reduced mobility
- Incontinence
- Previous UTI
- Prostate enlargement
- Kidney stones
- Catheters: Foley and condom caths

10

Diagnosing UTIs in the Nursing Home

Detecting an Infection

Can be more difficult in the elderly

- May have subtle symptoms
- May not display "classic" symptoms due to inadequate immune response
- Co-morbidities may impair resident's ability to verbalize or recognize symptoms

You should investigate:

- New or increased confusion
- Reduced food intake
- Falls
- New or worsening incontinence

But There's a Change in Mental Status

Remember When...

Quality Improvement Organizations

McGeer Criteria 2012 for Surveillance

Residents <u>without</u> an indwelling catheter:

One of the signs or symptom subcriteria and one of the microbiologic subcriteria must be present:

Signs or symptoms subcriteria include:

- 1. Acute dysuria or acute pain, swelling or tenderness of the testes, epididymis, or prostate
- If fever or leukocytosis are present one of the signs or symptoms localizing subcriteria must be present: Acute costovertebral angle pain or tenderness, suprapubic pain gross hematuria, new or marked increase in incontinence, new or marked increase in urgency, or new or marked increase in frequency
- 3. In the absence of fever or leukocytosis, two or more of the signs or symptoms localizing subcriteria in item 2 must be present

Microbiologic subcriteria include:

- At least 10⁵ cfu/mL of no more than 2 species of microorganisms in a voided urine sample
- 2. At least 10² cfu/mL of any number of organisms in a specimen collected by in-and-out catheter

	1. Costovertebral angle pain or tenderness
	2. Incontinence
	3. Urinary urgency
	4. Urinary frequency
	5. Suprapubic tenderness
	6. Visible (gross) hematuria
	A positive urine culture with no more than 2 species of microorganisms, at least one of
	A positive unne culture with no more than 2 species or microorganisms, at least one or which is a bacterium of $\geq 10^5$ CFU/ml
	which is a pacterium of 210° CFO/III
	Footnote: +Since fever is a non-specific symptom, it should be used to meet SUTI criteria even if the resident has another possible cause for the fever (for example, pneumonia).

Healthcare-associated Infection Surveillance Protocol for UTI Events for Long-term Care Facilities

INTERACT Guidance on Identification and Management of Infections

antibiotics

Which Criteria Do You Follow?

- Meet with your medical director to determine criteria/UTI definition that works best for your prescribers and your team
- Our guest speaker today will cover the physician's perspective on UTIs in the nursing home
- INTERACT[®] has a <u>UTI Care Path</u> available for download

Quality Improvement Organizations

Sharing Knowledge. Improving Health Care. CENTERS FOR MEDICARE & MEDICAID SERVICES

When Should a U/A C&S Be Sent?

- Urine testing should be performed when a resident has localized urinary tract signs and/or symptoms
- Odorous or cloudy urine are NOT indications for urine culture or analysis – these changes alone do not represent a UTI

- In one study, using urine odor to identify bacteriuria resulted in error in 1/3 of cases
- Even if urine odor is caused by bacteriuria, this does not indicate that infection needs to be treated unless other symptoms are present

Important Definitions

Bacteriuria

- Bacteria in the urine
- Resident has a positive urine culture

Asymptomatic Bacteriuria (ASB)

• Bacteriuria in the absence of genitourinary signs or symptoms

Symptomatic UTI

- Bacteriuria in the presence of genitourinary symptoms
 - Symptoms may include fever, dysuria, suprapubic pain or tenderness, frequency or urgency

Improvement

Why Not Treat It Just in Case?

Multiple randomized clinical trials in treating **asymptomatic bacteriuria** in LTC residents have shown NO benefit

- No difference in the # of symptomatic UTIs
- No improvement in survival
- Does not reduce risk of sepsis

Asymptomatic bacteriuria treatment is known to cause:

Increased adverse drug events

- Clostridium difficile (C. diff) infection
- Increased antibiotic-resistant organisms

The Physician Perspective

Resident

- Receive the best care possible
- Have engaged medical decision-making

Caregiver

• Receive care as well as appropriate education and support

Facility Engagement

- QAPI processes
- With IP and regard to antibiotic stewardship

Awareness of Other Issues

- Complex residents
 - Catheters
 - Chronic GU issues
- Complex issues
 - Timing of medical issues
 - Staffing
 - Communication challenges
